CLAIMS

We Claim:

A method of scribing a semiconductor wafer coated with a material; comprising:
imaging the wafer;

generating a picture of the wafer from the image of the wafer, the picture identifying the scribe lines of the wafer under the material; and

scribing the wafer using the identified scribe lines.

- 2. The method of claim 1, wherein the wafer is imaged using an infrared camera.
- 3. The method of claim 2 wherein the picture is generated by measuring the emissivity of features on the wafer surface including the scribe lines.
- 4. The method of claim 3, further comprising:

mapping the coordinates of the identified scribe lines on the wafer from the picture; and

providing the coordinates of the scribe lines to a dicing machine.

- 5. The method of claim 4, controlling the dicing of the wafer using the coordinates of the scribe lines.
- 6. The method of claim 1, wherein the imaging of the wafer further comprises;

heating the wafer to a predetermined temperature; and measuring the emissions of the heated wafer using an infrared camera.

- 7. The method of claim 6, wherein the predetermined temperature is approximately 90 degrees C or less.
- 8. The method of claim 6, wherein the predetermined temperature is less than the reflow temperature of the material on the wafer.
- 9. The method of claim 1, wherein the material is opaque.
- 10. The method of claim 1, wherein the wafer is imaged using X-rays.
- 11. The method of claim 1, wherein the wafer is imaged using ultrasound.
- 12. An apparatus comprising:
 - a stage configured to support a wafer;
 - an imaging unit configured to generate an image of the wafer on the stage; and
- a computer configured to identify the coordinates of scribe lines on the wafer from the image of the wafer.

- 13. The apparatus of claim 10, further comprising a temperature controller configured to control the temperature of the wafer on the stage.
- 14. The apparatus of claim 12, wherein the imaging unit is an infrared camera.
- 15. The apparatus of claim 12, wherein the imaging unit uses X-rays to generate the image of the wafer.
- 16. The apparatus of claim 12, wherein the imaging unit uses ultrasound waves to generate the image of the wafer.
- 17. The apparatus of claim 12, further comprising a dicing machine configured to dice the wafer using the coordinates of the scribe lines identified by the computer.
